The game is a perfect example of the risk associated with Early access. Devs took everybodies money and ran off with it. No updates or communication in over a year. Sadly, a really interesting concept gone to complete waste. DO NOT BUY!. Got it working somewhat on Windows 10, but frankly, and this is coming from a back in the days HOMM3 fan, time has taken it's toll.

Everything is tiny on my 2560x1440 screen and it's hard to see what to click on, making it less than enjoyable to play.

I am aware that I can change my desktop resolution, but I don't want to do that and mess up all my icons. I expect games to support setting screen resolution from within.

Anaqim. I would recommend the game itself, but begging for recommendations is a scummy practice. Take out that pop-up and I'll gladly recommend your game. This game is amazing is almost every way when it comes to racing. Some say the physics are off, some say it's horrible, I say it feels pretty much on point, and I've had motorbikes since I was 4yrs old.

The tracks are also very, very accurate, so much that there are videos of splitscreen comparison to the real lap times, and they come pretty close.

It's also very satisfying to see the impact of tweaking the bike setup, improving or damaging your on track performance by a significant ammount.

The other sides to the game do tell a different story though. The Career mode is there to give you a sense of progression, and although it is quite fun to fight your way from the Rookies Cup to the top class, the overall feel of any real character progression just isn't there. Sure, you can develop your bike, but even if you're already MotoGP Champion and the team's nr.1 rider, your bike still looks the same as it did. (as in Marquez's bike vs. Pedrosa's, for example).

The avatar choices for your rider are, quite simply, a joke. All look like a cartoon, and there's only a hand full of different ones to choose from. Be glad the helmet and leathers cover those faces up, and they do a great job at that, since there's great detail to them. Graphic detail on the bikes is simply stunning, making you marvel at the inner engine moving parts, for example. On the downside, there's Multiplayer... It's shockingly bad! Games 20+ years ago had better MP options and stability than this!! From lagspikes the size of Florida, to frequent disconnecting, not to mention the fact that there's only a Public lobby, and a Private one (to invite those friends of yours that, for some reason, also have the game).

Once you get into Public, you're stuck with changing rider, setup, driving aids or track. Everything else is already set for you, like race distance, weather, AI difficulty, etc... Can't think of many more frustrating experiences than to hop on a MotoGP bike, and all of your surrounding riders seem locked on Slingshot mode, crashing into you from out of nowhere.

To be fair, it's as if they completely forgot about MP during development, and on the last few days before launch, some Dev. decided to throw that MP bone in there, so people couldn't say there wasn't any. Such a shame.. Oh, and did I mention that you'll find yourself alone in that public lobby more often than not, since there's so few players going online? Yeah, there's also that...

Bottom line, if you're an online racing addict, move on to better pastures. This isn't it.

However, if you're looking to get under the skin of a MotoGP rider and stick to Career mode and collect those championships, than you're in for a treat.

My final score: 7/10.

There's much room for improvement, but I'm having a blast playing it regardless.. The plot, man. The plot on this game is the best i've seen on any other game.

Nah, jk. This game is...strange. At least, that was my frist though of this game. Different doesnt means bad, tho. Only con i've seen is that you cant see the ending (Because of a bug or something; not solveable for what i've seen).

After completing the badass difficulty i can assure you that this game isnt hard at all. I mean, I can beat da beat, but I cant beat Jigoku Kisetsukan in normal diff.

Music is quite enjoyable and stuff. It's short in my personal opinion, but it has a lot of replayability.

Try using Ghost Neddle, is the easiest ship to finish the game. The dream game of epic man babies everywhere.

Flawless, Fun, Violent, Magical and lots of other words.

Do not let your limited taste in fun ruin your happiness.

Head up the highway to the dungeon zone.

It is your only chance of escape

or

Here I go again on my own, going down the only road I have ever known. Like a wizard I was born to walk alone! And I made up my mind,

And I made up my mind, I aint wastin no more time

SO

. It has background glitches, I mean bad. If they can fix that little bug then yeah totally buy this game. If you don't mind the random glitches then still get it. But for me this is bad and it scared me at first. I thought my computer was breaking and possesed. When I realized it was the game I got fustrated. If anyone can fix this or know how to fix it let others know. Thanks.

Let me know because I love this series. It is fun. SO yeah.. Since "Fantasy Mosaics 23: Magic Forest" is basically identical to all its predecessors in the series, I'm simply copying\pasting my previous review(s). It's simply 100 fine, colorful nonograms that took me 8.9 hours to complete. Even at the list price of almost \$7, it's worth it.

100% Rubbish.

Game gives you NO tutorial and just tells you to click a map a few times and then crashes. Terrible tablet graphics and horrid music. Stay away at all costs!. a good game not bad all very fun. this game is great, the music, the refrences, the art, if you buy iy because of one review let it be this one, i just wish it was longer. Awesome action-puzzle game!

Orb Labs, Inc. is a fresh breeze in the world of VR games.

It can be best described as (action-)puzzle and with that definitely reminds me of "Portal" in some moments.

The main mechanics of this game is throwing orbs. It is easy at first if you accept a certain variance of your target position. The fun challenge is to master this throwing technique, becoming faster and more precise, which will help you beat later levels, especially on higher difficulties. Later in the game you really feel like some kind of orb-ninja:)

Another great plus of this mechanics is the immersion. You really feel like getting the hands on a new technology. Teleporting becomes reasonable (to some extend), unlike traditional "point-and-click"-navigation. And each new orb (cover, decoy, ...) adds to this experience.

Speaking of which, using the different types of orbs to get around the puzzle rooms requires good thinking and even action-packed evasion moves. You teleport, hear the alarm, crawl behind a box, grab the decoy orb,...

But there is always a multitude of possible solutions and an extra challenge is to get to the floors with as few orbs as possible. Due to fairly distributed checkpoints ("reconstruction machines") the frustration is reasonably low (most of the time;)) and you are always eager to try "just one more time".

You wouldn't expect a deep story in that kind of game, but infiltrating an underground lab to uncover the shady experiments of a company is enough to get me going. Plus, there is even more backstory to discover, if you have the patience to read each and every hint on your way down;)

After the story mode, you can try a higher difficulty, explore the floors for all the collectables and then... try the challenge mode, my personal highlight! Beating each level as fast as you can with only a few orbs is so thrilling and... well, challenging... I love it! Come, beat my WR:)

Polished gameplay, nice graphics, innovative ideas... and it's only a few dollars!

Definitely check it out!. You get what you paid for, 5K achievements at minimum price. If you\u2019re an achievement hunter looking to increase the number of achievements on your profile showcase, then I highly recommend buying this. Else don\u2019t waste your money. This is not a game, it\u2019s just a way of distributing achievements.. its assassin's creed unity that is all
